

Appendix A

Watershed Management Planning Guidance and Criteria

State and Federal Guidance:

State Guidance: Clean Michigan Initiative (CMI) Administrative Rules on Watershed Management Planning (Part 88, Water Pollution and Environmental Protection Act, 1994 PA 451, MCL 324.8808).

[Administrative Rules promulgated in October 1999 for the CMI Nonpoint Source Pollution Control Grants](#), require watershed management plans be approved by the DEQ. In addition, the rules require the DEQ to use CMI NPS funds to implement only DEQ-approved watershed management plans. The Nonpoint Source Program produced a guidebook (the “Blue Book”) for the development of watershed management plans that includes the required CMI elements and examples. The Guidebook is available at: http://www.michigan.gov/documents/deq/ess-nps-watershed-planning_210637_7.pdf.

Federal Guidance: The United States Environmental Protection Agency’s (U.S. EPA’s) Nine Minimum Elements of Watershed Management Planning

To ensure that Section 319 projects make progress towards restoring waters impaired by nonpoint source pollution, watershed-based plans that are developed or implemented with Section 319 funds must include the nine minimum elements of watershed management planning. The U.S. EPA believes that these nine elements are critical to assure that public funds are used effectively. The U.S. EPA has developed a guidebook describing these elements and including information on how these elements can be met. The guidebook is available at: http://www.epa.gov/nps/watershed_handbook/.

Additional guidance on the [nine minimum elements of watershed management planning](#) is also available on the NPS Program Web site at www.michigan.gov/nps.

Required Elements to Meet both State and Federal Watershed Planning Guidance

- Table comparing CMI, 319, and storm water planning criteria is available [here](#).
- Current checklist for CMI approval is [here](#).
- Current checklist for 319 approval is [here](#).
